

Andrei Nesterov

Unity 3D Developer

Tbilisi, Georgia | +995 55 10 09 487 | a.nesterov11work@gmail.com | [LinkedIn](#) | [Portfolio](#)

SUMMARY: Unity/C# Developer with 4+ years of experience developing gameplay mechanics and systems for mobile and PC games. Specializing in hyper-casual and midcore games for Google Play, App Store, Web and PC. Experienced with multiplayer and VR projects. I've worked across both startup and enterprise teams, building in-house games and 3D visualization tools, and independently developed and released 3 mobile titles.

SKILLS: Unity3D | C# | Git | AppLovin | Firebase Analytics | Firebase Firestore | Appmetrica | Agile | Zenject | Unity DOTS | Unity Muse | Photon Fusion | Gameplay Programming | VR Development | Shader Programming | Animation Rigging | Multiplayer Networking | Unity Editor Scripting | 3D Modeling | Web Development | AI Programming | XML | Json | Agile | Scrum | Kanban | SDLC

PROFESSIONAL EXPERIENCE

C#/Unity Developer (PC)

May 2025 - Present

[Rosneft](#), one of the biggest oil & gas companies in Eastern Europe

Project: Interactive 3D world map for visualizing oil and gas fields

- Expanded the detailed 3D world map with new analytical modules by designing dashboards and data-driven filters that improved usability and overall product value.
- Optimized heavy 3D scenes through performance profiling and multithreaded processing, cutting load times and increasing stability during large data renders.
- Refactored core visualization logic by improving update cycles and memory usage, resulting in smoother interactions and faster scene responsiveness.
- Resolved 70+ issues via systematic debugging and root-cause analysis, greatly improving product stability and user experience.
- Built an intuitive filtering system for regions and resource types using dynamic data queries and custom UI flows.
- Maintained flawless production stability, ensuring 0 critical failures through continuous monitoring and rapid fixes during live operation.

C#/Unity Developer (VR) → Unity Team lead (Web)

February 2024 – May 2025

[BCSports XR](#), enterprise VR/blockchain solutions provider for sports and entertainment

Project: Telegram Mini-App game - Drifters ([@Drifterz_bot](#))

- Delivered MVP of the mini-app game in 2 weeks by resolving architectural bottlenecks and improving code quality through systematic debugging, refactoring, and code reviews
- Implemented a data-exchange system with the front-end and created stable development pipelines, streamlining builds and accelerating iteration
- Optimized game performance and loading times through profiling, asset refinement, and model integration with the 3D department, achieving 3X app loading speed
- Led a team of three developers by setting clear workflows and establishing smooth cross-team collaboration, which accelerated delivery and reduced communication overhead

Project: VR Project Fusion - VR mini-football with fullbody tracking on virtual fields

- Built VR simulator prototypes and a Mirror-based client-server setup from scratch, cutting production costs through fast iteration and shaping the core technical direction of the project
- Improved VR performance by optimizing rendering, lighting, and asynchronous workflows, and collaboration with artists
- Contributed to polished visuals with custom Shader Graph materials - including a realistic grass shader used in the final product
- Drove project infrastructure forward by implementing AntiLatency, participating in the creation of multiple locations, and initiating CI/CD to stabilize and speed up development

Unity/C# Developer - Mobile (short-term contract)

June 2023 - February 2024

[PLAYDEX](#), Web3/NFT startup from Phillipines

Project: An aggregator of hyper-casual mini-games with co-op play

- Built the multi-user 3D game-aggregator from the ground up - architecture, UI, API, and mobile performance - including delivering 20+ production-ready screens and fully migrating the project from Flutter to Unity
- Delivered 5 hyper-casual games alongside the aggregator build, managing full reskinning, asset optimization, debugging, and integration into the platform's shared ecosystem
- Established the development workflow through code reviews, pipelines, task planning, and a clean DI setup with ZenJect
- Interviewed, hired, and mentored 3 new developers, ensuring fast onboarding and stable team productivity

Unity/C# Developer (Mobile)**April 2022 - June 2023****Studio Golden Games**, *Midcore mobile games developer*

Projects: [a mobile roguelike midcore game in the style of Vampire Survivors](#), [a mobile Battle Royale game in the style of Brawl Stars](#), [a mobile Tamagotchi game](#)

- Built the full application architecture and core gameplay systems in a short timeframe, including metagame features (energy, level progression, IAP) for 3 games
- Created levels and all primary mechanics from scratch, turning raw assets into polished, functional gameplay
- Designed and implemented responsive UI using Photoshop and Midjourney, shaping a consistent and recognizable visual style

Unity/C# Developer (Mobile/PC)**March 2021 - April 2022****Freelance**

- Delivered full projects and MVPs across multiple genres - FPS, RTS, Hypercasual, RPG - owning the core logic from prototype all the way to store release.
- Built modular systems for rapid prototyping, optimized GPU/CPU performance, and handled complex animation workflows, rigging, effects, shaders, and level assembly.
- Integrated analytics, ad SDKs, and custom shaders while also creating 3D assets and functional level layouts when needed
- Worked closely with the in-house teams (both tech and business stakeholders) to suggest and choose the best solutions.

EDUCATION

Ural Federal University, C# Developer Certificate**PFUR**, Bachelor's Degree in Pharmaceuticals**CERTIFICATION/COURSES/LICENSES**

Unity Learn, Creative Core, Junior Programmer, Unity Essentials**MosEnergo College**, 3Ds Max, Photoshop**LANGUAGES**

English (C1), Deutsch (B2), Russian (native)

ADDITIONAL ACTIVITIES

- Participate in game jams and build pet projects to experiment with new tools, features, and production workflows.
- Volunteer at IndieGo and DevGamm events, supporting attendees, assisting speakers, and ensuring smooth event operations.
- Consult on short-term game development projects, advising companies on product vision, gameplay direction, and creative decisions.
- Built an interactive game for an office LED floor touch-display as a standalone side project.
